Always Safe. Always Ready.
The Foss Washington shipyard, located in Seattle, WA, is one of the most completely equipped yards on the Pacific coast – offering full-service vessel repair and maintenance, as well as new construction.

At Foss we know that you can’t get your job done until your equipment is working properly. Our shipwrights, machinists, welders, diesel experts, painters, pipefitters and craftspeople are an experienced and dedicated team who work with you to get the job done – and done right. Our goal is to provide efficient, safe, environmentally conscious and cost-effective solutions that keep your fleet on the water.

Foss is a proven leader in using state-of-the-art technology to build, repair and maintain some of the finest vessels on the water today. We service tugs, barges, workboats, passenger and car ferries, fishing fleets, high-speed passenger vessels, fish processing vessels, government vessels and yachts.

Foss Maritime

The Foss Seattle shipyard helps you succeed in a competitive market.
Located on the Lake Washington Ship Canal in Seattle, WA the Foss Seattle Shipyard is one of the most completely equipped yards on the Pacific coast – offering full-service vessel repair and maintenance, as well as new construction.

The Seattle yard has three dry docks – the largest capable of handling ships up to 2,000 tons – plus cranes, lifts and other equipment required for a full range of vessel services. In addition, the yard has increased haul capacity with upland transfers for vessels up to 1,000 tons. The steam-powered Foss 300 floating derrick, with a capacity of 75 tons, is available to shipyard customers and for work throughout Puget Sound.

The Foss Terminal is located on six acres of multi-use property adjacent to the Seattle Shipyard and has 600 lineal feet of bulkhead waterfront. The Terminal is fully equipped for moorage and shore side services, and is the temporary home to a growing number of vessels undergoing essential scheduled maintenance and repairs.

When you decide to invest in your fleet, you can count on Foss’s proven track record to get the job done – and done right. Foss Seattle Shipyard’s dedicated team of experienced craftspeople provides cost-effective vessel repairs, major conversions, new vessel construction, and routine maintenance to commercial and recreational vessels.

FOSS OFFERS:

- Customizable Teams – We assemble a team tailored to match the requirements of each job. Our naval architects, licensed marine engineers, CAD designers, shipwrights, riggers, machinists, welders, diesel experts, painters, pipefitters and craftspeople work together to take on the most complex and custom projects.

- Project Management – Foss handles your project from start to finish. Offering a full array of services including project management and naval architecture, we can guide any new-build, conversion or repair project from concept to completion.

- Commitment to Quality – We relentlessly pursue perfection for your fleet as well as ours. The Foss shipyards build, maintain and repair a variety of vessels for our marine operations as well as for many others; we understand the need for reliable and cost-effective shipyard services.

- Commitment to Safety – Safety is the number one priority at Foss. Our Seattle shipyard complies with federal and state safety standards and has implemented a comprehensive behavioral safety program.

- Commitment to the Environment – We continually seek new ways to reduce waste and aggressively pursue opportunities to work our environmental values into all of our strategies.

- Coating & Surface Preparation – Our knowledgeable craftspeople are experts at sandblasting and coating to industry standards, or to meet any special customer needs.

- Machinery Repairs – Our ABS certified technicians are skilled in repairs on hydraulic, electrical, piping, deck machinery and installation, and work closely with the Coast Guard, DNV and other regulatory agencies.

- Conversions and Outfitting – Our accomplished team of skilled craftspeople have years of experience working together on vessel and barge conversions and modifications. We pride ourselves on handling the most complicated and complex onboard installations with creativity and solid know-how.

- Tail Shaft Repair & Fabrication – The Foss facility is one of the few ABS certified tailshaft repair and custom fabrication facilities on the U.S. West Coast. ABS certifications include ABS Gr2 carbon base metal, ABS Aquamet 18 & 19 and ABS Gr2 Stainless Steel Clad Welding. Two lathes accommodate shafting up to 54 feet in length, and repairs can be conducted seven days a week.

- Laser/Optical Alignment – Excessive vibration represents wear and tear on rotating components. Our modern and adaptable laser equipment can compute alignment readings and recommended corrections to keep your equipment working optimally.

- Special Hull Issues – Our shipwright shop can repair or modify most hull issues, including heavy-wood hulls and fiberglass.

- Other Services – We also offer custom cabinetry, exterior and interior painting, custom welding and steelwork, and bright work.
